

Fork Truck Interfaces

Fork Truck Station

The Fork Truck Station provides a set location for fork trucks to interface with conveyor equipment. Systec's Fork Truck Station provides extra stability to equipment by being mounted into concrete floor. There are many options for Fork Truck Stations including: gravity rollers, powered roller, powered Stable Stack plastic mesh top, side entry and individual fingers.

Fork Truck Ramp

Systec's Fork Truck Ramp provides a smooth surface for the forks of a lift truck to slide under the load to be picked up. The Fork Truck Ramp provides extra stability to equipment by attaching to an I-beam or directly to the floor.

Fork Truck Guard

Systec's Fork Truck Guard guard is set along the conveyor's end or side and allows lift trucks to access loads from conveyor, while protecting the conveyor from inadvertent damage.
